CONCLUSION

- > Our country is not a water deficit region, but due to severe neglect and lack of monitoring of water resources development projects, several regions in the country experience water stress from time to time.
- > It is therefore necessary to prevent it by making best use of the available technologies and resources to conserve the existing water resources, and make efficient use of them for agriculture, industrial production and human consumption.
- > Imposing regulatory measures to prevent the misuse of water and introducing rewards and punishment to encourage judicious use of water, will be helpful to conserve water.
- > Finally, awareness and orientation of all the water users to change their lifestyle to conserve water, can help the country to tide over the water crisis in the future.
